

WMS365 Mobile Inventory Count

Warehouse worker quick guide. Use the Android app or mobile web app to submit counts from the floor. Counts are saved as pending records first. Office staff reviews and posts adjustments later.

Updated May 22, 2026

Fast Flow

1. Open **WMS365 Scanner** or the WMS365 mobile web app.
2. Sign in with your warehouse login.
3. Select the correct **Company**. The company stays locked for the count.
4. Tap **Inventory Count**.
5. Scan or key in the **Location**.
6. Scan or key in the **Product / SKU / UPC**.
7. Enter the counted quantity in **cases**.
8. Enter **lot** and/or **expiry** only if the fields appear.
9. If location or SKU is not found, take a picture and continue.
10. Tap **Save Count**, then choose another SKU or the next location.

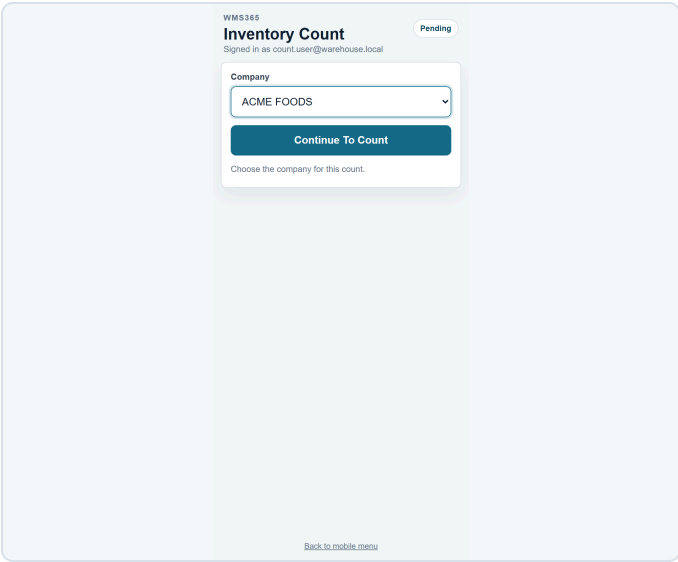

Worker Rules

- Do not switch companies unless a lead tells you to.
- Scan when possible. Key in only if the barcode will not scan.
- If the app shows a warning, take the photo before saving.
- Counts do not change inventory immediately.
- Use **Pending** to check items waiting to sync or review.

Company lock: After you choose a company, WMS365 keeps that company selected so the count does not get entered under the wrong customer. Use the **Back** or switch-company option only when you truly need to change companies.

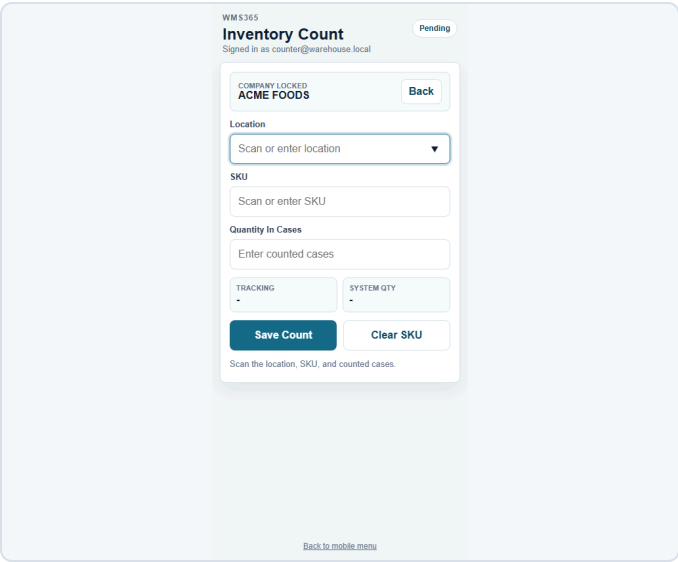

1. Select Company

Choose the customer/company once at the start. This keeps all counts in the right account.

2. Company Stays Locked

The count screen shows the locked company. Use Back only if the company is wrong.

3. Scan Or Key In

Use camera scan for location and product. If scanning fails, type the location or SKU.

Report Bug / Request Feature

What happens after Save: The count is submitted as pending. A desktop user reviews location, SKU, counted quantity, system quantity, variance, lot/expiry, worker, and date/time before posting.

Stop and ask a lead when: the wrong company is locked, the product label is damaged, the physical product does not match the SKU, the location is blocked, or the same product appears in two mixed locations.

Quick Checklist Before Leaving A Location

- Every SKU in the location was counted.
- Case quantity was entered correctly.
- Lot and expiry were entered if shown.

- Photo was added for unknown location/SKU or label problems.
- No pending error remains on the device.

WMS365 Mobile Inventory Count Worker Guide. Counts are reviewed on desktop before inventory is adjusted.
