

Connect Shopify to WMS365

Use this guide when your warehouse needs to pull Shopify orders, sync inventory, and send shipment confirmations from WMS365.

WMS365 app URL:

https://app.wms365.co

WMS365 will send you a separate secure one-time link for the Shopify Admin API access token. Do not email the token in a normal message.

What WMS365 Needs

Information	What to Provide
Shopify store domain	Your <code>.myshopify.com</code> domain, for example <code>your-store.myshopify.com</code> .
Admin API access token	The token from a Shopify Custom App. It usually starts with <code>shpat_</code> .
Shopify location	The Shopify location that should receive WMS365 inventory updates, if inventory sync is enabled.

Important: Do not send your Shopify password, owner login, recovery codes, or billing access. WMS365 only needs the scoped Admin API token.

Step 1: Open Shopify Custom Apps

- 1 Log in to your Shopify Admin as a store owner or administrator.
- 2 Open **Settings**.
- 3 Open **Apps and sales channels**.
- 4 Open **Develop apps**. If Shopify asks you to allow custom app development, approve it only if your company policy allows it.
- 5 Create a new custom app named **WMS365**, or open your existing WMS365 app if one was already created.

Step 2: Configure Admin API Scopes

Select only the scopes needed for your WMS365 workflow.

Scope	Why WMS365 Uses It
read_orders	Pull released Shopify orders into WMS365.
read_products	Read product and variant details for SKU matching.
read_inventory	Read Shopify inventory item/location data.
write_inventory	Push WMS365 available inventory back to Shopify, if enabled.
read_locations	Find the correct Shopify location for inventory sync.
read_fulfillments	Check fulfillment status before sending shipment confirmation.
write_fulfillments	Send carrier/tracking confirmation after WMS365 ships the order.

Step 3: Install the Custom App

- 1 After selecting the scopes, click **Save**.
- 2 Click **Install app**.
- 3 Shopify will show the Admin API access token one time. Copy it carefully.
- 4 Keep the Shopify page open until the token has been submitted successfully to WMS365.

Step 4: Submit the Token Securely

- 1 Open the secure WMS365 credential link provided by your warehouse or WMS365 support team.
- 2 Paste the Shopify Admin API access token into the secure page.
- 3 Submit the form. The link can only be used once and expires automatically.
- 4 Notify your warehouse contact that the token has been submitted. They will test the connection from WMS365.

What Happens Next

- WMS365 stores the token encrypted under your company only.
- WMS365 can pull Shopify orders into the warehouse system.
- When orders ship, WMS365 can send shipment confirmations and tracking back to Shopify.
- If inventory sync is enabled, WMS365 can push available stock to the selected Shopify location.

Support: If you are unsure which scopes to select, contact support@wms365.co before installing the Shopify Custom App.
